IDENTIFYING POOR QUALITY TRADES

Particulars	Observation
Asset	Bitcoin
Trade Date	18.09.2026
Trade Strategy Used	Combined Strategy
Trade Outcome	Profit
Entry Price	78,004
Exit Price	78,018

Was the Trading Plan Followed?	Party
Was the Trade Aligned with the Strategy?	Party
Why Was the Trade Entered?	The long position was taken expecting the price to increase.
What Made This a Poor Quality Trade?	The trade produced only a very small profit.
Type of Problem Identified	Low profit potential.
Evidence from the Trade	The trade earned from 78,004 to 78,018 only with a return of +0.14
How did the Problem Affect the Trade?	The small movement resulted in almost no profit.
What Should have been done Differently?	A stronger and clearer trading opportunity should have been selected.
Corrective Action for Future Trades	Wait for a clear trend with better profit potential.
Key Learning	A trade can be profitable but still have very low returns.
